Instructions for RST Forms Note: XR is used to indicate High Risk, since HR indicates Human Remains. XP = High Probability

1. The purpose of RST- 1 & 2 is to aid in rapidly determining Probability of Viable Victims and Relative Risk for numbers of structures.
2. The forms would be used when US&R forces need to respond to a large number of damaged structures following a sudden event.
3. Each structure is given a Rating for Viable Victim Probability: LP = Low, MP = Medium, and XP = High Probability.
   (Note: Input from Search Team Mgr & Rescue Team Ldr or Squad Officer should be saught in determining Victim Viability Rating.)
4. Each structure is given a Rating for Risk: LR = Low, MR = Medium, and XR = High Risk.
5. These ratings should be based on the criteria listed, and more than one structure may have the same rating.
6. The ratings should be based on the best judgments of the team, and must be made very rapidly. This form is only a guide.
7. Record GPS coordinates in the provided box. Specify format (always check with IST or Plans to determine proper format & datum).

US&R Structure / Hazards Check List - HAZ-3 **By:** _____

This is only a Check List. Check all Appropriate Structure Hazards

STRUCTURE DESCRIPTION:

Bldg ID: _____

_____

No. Stories: No. Basements:

TYPE OF COLLAPSE:

Pancake | Soft 1st Floor | Wall Failure
Torsion | Middle Story | Overturn
Other:

From a SAFE Distance, CHECK:

- ☐ Alignment of Structure's Corners & Faces
- ☐ Alignment of Structure's Floors
- ☐ Condition of Openings
- ☐ Condition of Facing or Projecting Elements
- ☐ Presence of Precast Conc Facing or Brick/Stone Veneer
- ☐ Presence of other FALLING HAZARDS
- ☐ Presence of Rootop Equipment, Towers, etc
- ☐ Presence of Distinctive Elements, Additions, Stairwells
- ☐ Any Alternate Energy Source - Generator, Solar Elec
- ☐ Presence of Tanks w/Explosive/Corrosive Material

Walk around Structure and CHECK:

- ☐ Continuity of Vertical load Path
- ☐ Continuity of Lateral Load Path
- ☐ Alignment & Condition of all Wall Piers
- ☐ Condition of Foundation & Adjacent Ground
- ☐ Presence of Flowing Liquids
- ☐ I.D Areas of Structure to be avoided
- ☐ I.D. Sections with potential for Brittle Failure
- ☐ I.D most PROBABLE Collapse Mode
- ☐ I.D All Exterior FALLING HAZARDS
- ☐ I.D All Ingress and Egress Locations

If you choose to enter the Structure:

- ☐ Make sure that at least one other Team Member remains outside and you maintain radio contact
- ☐ Notify TFL you are entering structure - Which Side
- ☐ Leave Easily Visable Trail as you explore interior **
- ☐ Check Each Closed Door for heat PRIOR to OPENING
- ☐ Inspect Ground Floor Level Before moving Upward
- ☐ Check Main Columns and Shear Walls-Cracks, Spalling
- ☐ Check Main Beam to Column Connections
- ☐ Check Stair wells for Damage and Access
- ☐ Check Condition of Floor System
- ☐ I.D. All Interior Collapse Hazards
- ☐ I.D All Interior Falling Hazards
- ☐ Locate Safe Havans and Escape Routes
- ☐ Report all Data to Outside Person before continuing
- ☐ Proceed Up/Down Only if Can Maintain Radio Contact
- ☐ Proceed to Upper Stories, Check each before Proceding
- ☐ Proceed to Basement and Check Structure & Foundation

NOTES

1. ** Suggestions for Visable Trail are: Light Sticks, Paint Arrows on floor, Electronic Relay Devices

US&R Shoring Check List - SHOR-1 **By:** _____

This is only a Check List. Check all Appropriate Structure Hazards

STRUCTURE DESCRIPTION:

Bldg ID: _____

_____

No. Stories: No. Basements:

TYPE OF COLLAPSE:

Pancake | Soft 1st Floor | Wall Failure

Torsion | Middle Story | Overturn

Other:

SHORING SIZE-UP

I.D. Damage, Hazards & Potential Victim Locations:

- ☐ What caused collapse?
- ☐ Potential for Aftershocks?
- ☐ Is structure leaning and/or openings racked?
- ☐ Are floors sloped? Is floor hinged or free?
- ☐ Is there a V or A collapse w/ ladder effect?
- ☐ Best method to mitigate hazards & damage?
- ☐ Avoid, Remove, Limit Access
- ☐

If Shoring is to be built, determine the following:

- ☐ Type & Placement relative to Hazards and Victims
- ☐ Type of structure: Concrete, Wood, URM, PC Conc.
- ☐ What supports the shoring; Slab on Ground, Soil, Basement Slab, or upper Story
- ☐ Condition of supported Structure: Cracked Solid Slab, Beamless Slab, Beams supporting slabs or joist; Wood or Steel joist or trusses
- ☐ Support beams that support slabs or joists
- ☐ Check sagging beams/girders, or beams with damaged connections
- ☐ For wood structures, to support joists, place shores perpendicular to joist and align posts under joist.
- ☐ Consider Sloped Floor Shores or Cribbing for limited height conditions.

Prepare the area to be shored:

- ☐ May need to remove debris and floor coverings.
- ☐ If soil supported, use 18"x18" foot under post location
- ☐ Consider temporary shores to reduce risk (T or Dbl-T).
- ☐ Prefab. shoring as much as possible to reduce risk.
- ☐ Add bracing after wedges are tightened.

SHORING INSPECTION

Inspect shores every 12 hours (Shift Change), and/or following any known loading change such as: Aftershocks, High Winds, Secondary Explosion, Load Shift and/or Change.

Check for proper construction of shore

- ☐ Check to see if posts are straight, plumb, and have full bearing on header and wedges
- ☐ Are connections tight and wedges snug?
- ☐ Is header in full contact with supported structure?
- ☐ Has sole deflected due to soft soil or support?
- ☐ Are all components of shoring system in place?

Check for signs of overload.

- ☐ Cupping of wedges and crushing of sole.
- ☐ Crushing of header at post.
- ☐ Splitting of header at end of overhang.
- ☐

Actions to be taken if signs of overload are observed.

- ☐ Add additional shoring.
- ☐ Have structure re-evaluated by a StS to see if it is responding differently than expected
- ☐ Check assumptions of original shoring design.
- ☐
